Notes:

- 1) Data provided/confirmed by each school and/or posted on their website.
- 2) For students who matched with a preliminary year program AND a subsequent categorical residency program, only the categorical program (ie, their eventual specialty) & its locale are reported above.
- 3) "Projected In-La PC MDs" totals are in pink in the far right column, and project how many of each field will practice PC in Louisiana in 3-4 years, after residency training
The calculation first sums the highlighted rows (potential PC totals) & then adjusts the total for attrition from PC practice based on published estimated rates of retention in PC practice after residency
The proportion of residents likely to practice PC, as reported in following reference, are: FM= 91%, IM=20%, Ped=44%, Med/Ped=50%.
(See [COGME 20th Report, Advancing Primary Care](https://www.hrsa.gov/sites/default/files/hrsa/advisory-committees/graduate-medical-edu/reports/2010.pdf) - <https://www.hrsa.gov/sites/default/files/hrsa/advisory-committees/graduate-medical-edu/reports/2010.pdf>)
Following that, the figures are adjusted using an estimated "retention in La" historical rate of 50% (for all trainees, whether doing a La or non-La residency).
The final projections for PC residency completers who enter PC practice in LA are intended as an estimate, at 3-4 years after Med School graduation, for when this cohort completes residency.
- 4) Grads in row 53, 54, 55 and 56 ("Oral Surgery/MD Program, Research, Advncd Degree, Outside Job, No Match or Scrambled Position") are not included in 'In La' or 'Outst' subtotals, only in Totals.

Data as of 05-2024
